ABSTRACT

Average salary increases for 2,399 faculty in the field of communications are reported for 1982-1983 and 1985-1986, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 108,074 faculty at 174 public colleges and 193 private colleges, representing 41 academic disciplines. In 1982, 83 public and 76 private colleges reported on communications faculty salaries, while 116 public and 100 private colleges reported in 1985. Between 1982 and 1985, average salaries of faculty in this field increased 20.6% at public colleges and 16.6% at private colleges. The average salary for communications faculty was below the average faculty salary in the other 40 disciplines (9% below for public colleges and 11% below for private colleges). Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total average salaries of all public and all private colleges in both years studied; comparisons between the 2 years and with the Consumer Price Index of changes in cost-of-living; and comparisons with 40 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN COMMUNICATIONS

FOR THE YEARS

1982-83 AND 1985-86

The Authors:

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history, and Director of the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina. His Ph.D. was earned at the University of California at Los Angeles.

Patton B. Reighard is an associate professor of communication arts, also at Appalachian State University. His Ph.D. was earned at The University of Texas at Austin.

HE019741

SALARY-TREND STUDY OF FACULTY IN COMMUNICATIONS FOR THE YEARS 1982-83 AND 1985-86

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1985-86. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 41 selected academic disciplines including communications. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of communications in the CIP is as follows:

> A summary of groups of instructional programs that describe the creation, transmission, and evaluation of messages. These groups include communications, general; advertising; communications research; journalism (mass communications); public relations; radio/television news broadcast; radio/television, general; and, communications, other.

This article presents a summary of the overall average salary increases in the discipline/major field of communications from the "baseline year" of 1982-83 to and including the "trend year" of 1985-86 for both public and private institutions. Of the 227 institutions which participated in CUPA's

PUBLIC (AASCU) study of 1982-83, 174 also participated in 1985-86. Data from those same 174 institutions were used in both the baseline year and the trend year. Of the 299 institutions which participated in CUPA'S PRIVATE study of 1982-83, 193 also participated in 1985-86. Data from those same 193 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in communications for both public and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1982-83 and 1985-86) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .32 for associate professor of communications in the 1982-83 public study means that 32 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1982-83, PUBLIC 1985-86, PRIVATE 1982-83 and PRIVATE 1985-86. For example, a SALARY FACTOR of .95 for assistant professors in the discipline/major field of communications in the 1982-83 public study means that their salaries are 5 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1982-83 or 1985-86). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 41 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of communications with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1982-83 and the "trend year" of 1985-86 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1982-83 AND 1985-86

In the PUBLIC 1982-83 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 83 of the 174 public (AASCU) institutions. The average salary of the 706 faculty was $23,758. This average salary was approximately 10 percent (0.90) lower than the average salary of $26,376 for all 35,137 faculty in ALL MAJOR FIELDS in the 1982-83 public study.

In the PUBLIC 1985-86 salary study in the above table, the discipline/major field of communications was reported in 116 of the same 174 public (AASCU) institutions. The average salary of the 947 faculty was $28,651. This average salary was approximately 9 percent (0.91) lower than the average salary of $31,610 for all 39,815 faculty in ALL MAJOR FIELDS in the 1985-86 public study.

The increase in average salaries for all faculty in communications after three years in the public institutions studied was 20.6 percent ($28,651 minus $23,758 equals $4,893). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.9 percent or an average of 3.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 19.8 percent ($31,610 minus $26,376 equals $5,234). In comparison to the discipline/major field of communications (20.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 0.8 percent (20.6% minus 19.8% equals 0.8%) less than faculty in the discipline/major field of communications.

Since the discipline/major field of communications is one of the "younger" disciplines, the reader may note that the faculty mix percentage is lower at the professor rank than at the assistant professor rank in the public studies;

0.20 vs. 0.31 (1982-83) respectively; and 0.23 vs. 0.29 (1985-86) respectively. This is different than the faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies: 0.33 vs. 0.27 (1982-83) and 0.36 vs. 0.26 (1985-86) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors than communications in both public studies.

Finally, it is substantiated by the high hiring rate of new assistant professors in communications in the public studies: 5.4 percent (38/706) in 1982-83 vs. 3.6 percent (1,268/35,137) in ALL MAJOR FIELDS in 1982-83. Also, the hiring rate of new assistant professors in communications in 1985-86 was 4.8 percent (45/947) vs. 3.9 percent (1,541/39,815) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of communications is higher than for ALL MAJOR FIELDS in both the public studies of 1982-83 and 1985-86.

RESULTS OF THE TWO PRIVATE STUDIES, 1982-83 AND 1985-86

In the PRIVATE 1982-83 salary study in the above table, the reader may note that the discipline/major field of communications was reported in 76 of the 193 private institutions. The average salary of the 289 faculty was $22,658. This average salary was approximately 10 percent (0.90) lower than the average salary of $25,213 for all 15,823 faculty in ALL MAJOR FIELDS in the 1982-83 private study.

In the PRIVATE 1985-86 salary study in the above table, the discipline/major field of communications was reported in 100 of the same 193 private institutions. The average salary of the 457 faculty was $26,420. This average salary was about 11 percent (0.89) lower than the average salary of $29,850 for all 17,299 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

The increase in average salaries for all faculty in communications after three years in the private institutions studied was 16.6 percent ($26,420 minus $22,658 equals $3,762). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 5.9 percent or 2.0 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.4 percent ($29,850 minus $25,213 equals $4,637). In comparison to the discipline/major field of communications (16.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 1.8% percent (18.4% minus 16.6% equals 1.8%) more than faculty in the discipline/major field of communications.

Since the discipline/major field of communications is one of the "younger" disciplines, the reader may note that the faculty mix percentage is extremely lower at the professor rank than at the assistant professor rank in the private studies: 0.15 vs. 0.44 (1982-83) respectively; and 0.18 vs. 0.42 (1985-86) respectively. This is dissimilar to the faculty mix percentage in ALL MAJOR FIELDS for both private studies: 0.28 vs. 0.33 (1982-83) respectively; and 0.30 vs. 0.31 (1985-86) respectively.

Finally, the reader may note that the hiring rate of new assistant professors in communications in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1982-83, 5.2 percent (15/289) vs. 4.7 percent (739/15,823) respectively; and in 1985-86, 9.2 percent (42/457) vs. 4.9 percent (843/17,299), respectively. In other words the hiring rate in the discipline/major field of communications is greater than for ALL MAJOR FIELDS in both the private studies of 1982-83 and 1985-86.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of communications and compared that information with 40 other academic disciplines/major fields over a period of three years: the "baseline year" of 1982-83 and the "trend year" of 1985-86. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 2,399 faculty in the discipline/major field of communications participated and were included in the overall total of 108,074 faculty in all 41 disciplines/major fields in all four studies. The same 174 public (AASCU) institutions and the same 193 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of communications is currently (1985-86) some 9 and 11 percent below the overall average faculty salary in the other 40 disciplines/major fields of both the public and private studies respectively. In the discipline/major field of communications, the average faculty salary in the private institutions, while the same in 1982-83, lagged behind that of the public institutions in 1985-86. While average salaries increased in both the public and private institutions in the 1985-86 study, the salary factor for the private study dropped 1% and increased by 1% in the public study, in comparison to the salary factor for ALL MAJOR FIELDS.

Second, the CPI of October 1985, in comparison to the CPI of October 1982, indicates that the faculty in communications, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Although communications average faculty salary increases

were above cost-of-living escalations, average faculty salaries in private institutions have some catching up to do in relationship to ALL MAJOR FIELDS. However, public and private faculty salaries in the discipline/major field of communications are comparable when comparing to ALL MAJOR FIELDS of public and private institutions.

Since, the discipline/major field of communications is one of the younger disciplines, there is a marked difference between those faculty in the public and private institutions in comparison to ALL MAJOR FIELDS. There are currently (1985-86) 6% more assistant professors than professors in the public institutions and 24% more assistant professors than professors in private instituions. Both communications faculty in public and private institutions are being promoted faster than their colleagues in ALL MAJOR FIELDS. It seems a smaller percentage of new assistant professors are being hired in the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be made in communications, and in other disciplines/major fields, on an annual basis.
